EDUCATION

Egypt-Japan University of Science and Technology (E-JUST)

Oct 2023 – Feb 2028 (expected)

B.Sc. Computer Science & Engineering

EXPERIENCE

e& (Etisalat)

Aug 2026 – Sep 2026

UI/UX Design Intern

Cairo, Egypt (Hybrid)

- Audited the live e& CX Solutions enterprise site end-to-end: 26 findings, 4 high-severity – including 11 employee emails exposed in page source (escalated to legal as a PDPL risk) and a 38.6 MB homepage from auto-playing background videos
- Corrected the team's stack diagnosis (hash-routed Angular SPA, not "old Bootstrap"), reframing the search-visibility problem as routing rather than styling
- Redesigned the landing page and built a tokenized Figma design system (9 color families, light/dark semantic tokens) within the governed e& brand; presented and iterated across review rounds with the UI lead and manager

Shaheen for Import & Export

Aug 2022 – Present

Sales → Operations → Technical Lead (family business)

Tanta, Egypt

- Joined the family tire & battery business in sales at 18 and grew into leading all of its technical operations
- Took over shaheentire.com – a production Laravel 12 e-commerce platform built by an external team – in May 2026 as sole maintainer, and brought it back from failing: 1,000+ commits, 530 pull requests merged, 361 issues closed, 38 failing tests fixed, automated deploys; built AI-first with Claude Code, every change reviewed and tested
- Launched online card and mobile-wallet payments (Paymob, Sep 2026) with server-verified payment confirmation and automatic cancel-and-restock of unpaid orders
- Grew Google search clicks about $15\times$ in under two months (318 per 90 days → 1,608 per 28 days); customers now find the store by searching for tires rather than the brand name (branded share 84% → 4%)
- Built the internal staff platform: task board, shared calendar and notifications, an Excel price-list import pipeline, and an import cost calculator that matches the owner's own spreadsheet to within 0.01 EGP

Optima Professional Services

Jun 2026 – Jul 2026

Cybersecurity Intern

New Cairo, Egypt

- Conducted hands-on labs with Cisco Packet Tracer and Palo Alto firewalls to design secure network topologies, defense perimeters, and routing protocols (OSPF, EIGRP)
- Performed network scanning and vulnerability assessment using Nmap; completed red team CTF exercises (Mr Robot)

PC Building Store

Jun 2019 – Aug 2022

Technical Assistant

Tanta, Egypt

- Assembled and configured 40+ custom PC builds for gaming, creative, and business clients
- Diagnosed hardware and software issues including thermal management, BIOS conflicts, and driver compatibility; advised customers on cost-effective upgrades, driving repeat business

PROJECTS

Sotto – Offline Voice Dictation

Rust, Tauri v2, ONNX Runtime, Parakeet ASR, llama.cpp, Vulkan

- Desktop app that transcribes speech, polishes it with a local AI model, and pastes it into any application – entirely offline
- $70\times$ faster speech recognition via Vulkan GPU acceleration; grammar correction runs on-device with Qwen 2.5 1.5B through llama.cpp

Sukoon – Glucose Monitor Viewer

Kotlin, Jetpack Compose, Room, Material 3

- Android app for my own Type 1 diabetes management, replacing the stock glucose-sensor app: time-ranged glucose graphs, insulin tracking, and a clean dashboard

Kai's Flow – Personal Planner

React 19, TypeScript, Vite, Supabase, FullCalendar, Zustand

- Daily-use planner combining calendar time-blocking, tasks, a journal, a reading library, and a focus timer; works offline; deployed on Cloudflare Workers

MRL Eye State Classification – Drowsiness Detection

PyTorch, DenseNet121, ViT, CUDA, OpenCV, Arduino

- Trained DenseNet121 and Vision Transformer models on about 84,000 infrared eye images to >96% validation accuracy; ViT selected as the team’s final model
- Real-time webcam pipeline that triggers a screen flash, system beep, and an Arduino-wired buzzer/LED when the driver starts to nod off

Customer Ordering System (team project, repo owner)

FastAPI, PostgreSQL, Docker, React, HuggingFace

- Owned the cart and checkout part of a team e-commerce platform; built middleware that strips personal data from logs and blocks prompt-injection attempts before they reach the AI model
- Integrated a HuggingFace model that prioritizes support tickets automatically; containerized PostgreSQL with Docker Compose

Scentura ERP – Aeron Frontend (contributor)

React 19, TypeScript, TanStack Router, shadcn/ui, Tailwind v4

- Designed and built the frontend prototype for a classmate’s perfume-company management system: 23 screens, dark/light theming, interactive dashboards

SKILLS

How I work: AI-first development with Claude Code – I plan the change, review every diff, and verify it with tests

Shipped with: PHP / Laravel 12, Livewire, Filament (shaheentire.com) · TypeScript / React 19 (Kai’s Flow, Scen-tura) · Rust / Tauri (Sotto) · Kotlin / Jetpack Compose (Sukoon) · Python / PyTorch, FastAPI (MRL Eye, Customer Ordering)

Data & deploys: SQLite, PostgreSQL, Supabase, Docker Compose, GitHub Actions, Cloudflare, cPanel/SSH

On-device AI: ONNX Runtime, llama.cpp, Vulkan GPU acceleration, PyTorch (CUDA)

Security: Cisco Packet Tracer, Palo Alto firewalls, Nmap, payment callback verification

Design: Figma (Variables, design tokens), UX audits, design systems, Adobe Photoshop & Illustrator

CERTIFICATIONS & TRAINING

Flutter Mobile App Development (72 hours)

Jul – Oct 2025

YAT Learning Center, Tanta

Graphic Design (75 hours)

YAT Learning Center, Tanta – Adobe Photoshop, Illustrator, design principles

Full Stack Web Development (141 hours)

Oct 2021

YAT Learning Center, Tanta
